System Requirements.....	2
Fixed Issues.....	3
Known Issues .....	6

This document contains late breaking or other information that supplements RADVISION SCOPIA Mobile v3.0.33.

## What's New

This is a bug fix release. No new features were added. Please refer to the “Fixed Issues” section for a list of the issues that were fixed in this release.

Please visit our product page [www.radvision.com/mobile](http://www.radvision.com/mobile) for more information about our product.

## Compatibility

SCOPIA Mobile v3.0.33 is compatible with the following product versions:

- SCOPIA Elite MCU version 7.6.1
- SCOPIA iVIEW Suite version 7.6.1
- SCOPIA Desktop Server 7.6.1
- SCOPIA XT Desktop Server 7.6.1

### Notes:

1. SCOPIA Mobile v3.0.33 will not connect to a server with a version older than 7.6.1. If you do not want to upgrade your infrastructure components (SCOPIA Desktop Server, SCOPIA iVIEW and SCOPIA Elite MCU) to 7.6.1 please continue using SCOPIA Mobile v2.5, which will remain available on the Apple App Store.
2. SCOPIA Mobile v3.0.33 is not compatible with the SCOPIA Classic MCU.

## System Requirements

This section describes system requirements for SCOPIA Mobile v3.0.33.

SCOPIA Mobile v3.0.33 is compatible with the iPod, iPhone and iPad with an ARM v7 processor or better. This includes:

- iPhone 3GS
- iPhone 4
- iPod Touch 3<sup>rd</sup> generation
- iPad 1
- iPad 2

SCOPIA Mobile v3.0.33 requires iOS version 4.0 or better.

## Fixed Issues

This section details the list of issues that were fixed in this version.

Issue ID	Issue Description
8517	Automatically hide the presentation coverflow and toolbar after 5 seconds of inactivity.
8878	Fix issue when, in some rare circumstances, if you are in a meeting where someone is presenting, and you rotate the iPad, you might lose the remote video picture.
9157	When disconnecting a mobile client by terminating the meeting from the moderator menu, the mobile client got a message that "the meeting has been terminated", even though only his connection was terminated. The message has been changed to "Your connection has been terminated".
9173	Fixed an issue when the user is prompted to enter a moderator PIN. If you did not input anything in the dialog and simply tap the OK button, the application became non responsive.
9197	Fixed issue when switching between cameras - now the "selected camera" button is updated immediately, and the other buttons are disabled until they can be selected again.
9200	Increased the new slide indicator fade out delay from 3 to 5 seconds, giving you more time to tap on it (when in a video-only view) to switch to the presentation view.
9202	Change iPad behavior when in landscape with video and presentation - when the view is large presentation/small video, instead of hiding the video PIP whenever the presentation coverflow was shown, only hide it when reviewing slides. Additionally, move the video PIP so that it is not obscured by the toolbar or by the presentation coverflow.
9205	Fixed issue when, in some rare circumstances, you could end up in a mixed layout (video and presentation) even if the current layout selected is Presentation Only.
9208	If you entered bad credentials in the settings dialog and tap <i>Done</i> to validate, the error dialog is now displayed

	immediately.
9209	Fixed a problem which would occur if you tried to launch SCOPIA Mobile from a malformed URL. An error message is displayed, but when you tap OK to dismiss the error, you would be brought to a black screen.
9211	Fixed lip sync issues if you were using the AAC audio codec.
9213	Fixed a problem which could occur after the first time installing SCOPIA Mobile. If you launched SCOPIA Mobile from a URL (either from an email or from the calendar), it would not try to connect as guest, but would instead ask you to give your credentials.
9305	On iPhone, when the meeting has a moderator PIN and you tried to mute a participant (or do some other action requiring moderation rights), the prompt for the moderator PIN was off the screen.
9306	Fixed the possible display of negative badge numbers indicating the number of slides not viewed.
9412	The user credentials are now stored / retrieved from the device keychain, instead of storing them in settings. This encrypts the credentials on the device. The username / password / server fields were removed from the device Settings application (and are only available through the in-app settings). If you had previous settings (through the settings app) for these values, they are read and then written to the keychain, and removed from the user defaults.
9441	Fixed an issue on iPad which would occur for a user who is configured with multiple virtual rooms. When tapping <i>Connect to your virtual room</i> , the user is prompted to choose the virtual room from a list, but after choosing the room, SCOPIA Mobile would not connect.
-	Fixed an issue with audio encoding when there was occasionally breakup on send.
-	Fixed a video quality issue when connecting to a meeting with client encryption enabled on the SCOPIA Desktop server.
-	On iPad (landscape view), improved the animation for resizing or moving the Picture-in-Picture.
-	Optimized SCOPIA Mobile for iPhone 4S, allowing the video

	capture to increase to 270p, and allowing the Mobile client to receive up to 480p.
--	--

## Known Issues

This section details the list of issues that remain unresolved in this version.

Issue ID	Issue Description
9017	When you connect with the option to mute your microphone when joining a meeting, your audio might be heard for a very short period of time. We are working on a fix that will be available shortly.
9084	If you connect to an audio-only meeting, you will still see your video preview while connecting. Note that you will not send video in such a meeting.
9194	If you launch SCOPIA Mobile from either web page or URL, where the server defined in the web page doesn't quite match the server in the settings, you will connect as a guest since SCOPIA Mobile does not recognize the server as your home server.
9212	In some rare circumstances, when you change your server and / or credential settings, SCOPIA Mobile might try to connect to the previous meeting that you connected to.
9225	When the moderator terminates the meeting, you might get an erroneous error message. Just dismiss it.
-	<p>When connecting to a SCOPIA XT Desktop (using the internal MCU of the SCOPIA XT1000 endpoint), you will face the following limitations:</p> <ul style="list-style-type: none"><li>- You must enter 1 in the meeting id field</li><li>- You will not be able to receive the presentation</li><li>- You will only connect as a guest - so you will not see the participant list and will have no moderation functionality</li><li>- You can only have G.711 audio</li></ul> <p>All of these limitations will be fixed in a future release of SCOPIA Mobile and SCOPIA XT Desktop.</p>
-	When using version 7.6.1 infrastructure (iVIEW, MCU, SCOPIA Desktop Server), if a meeting is locked before a presentation is started, SCOPIA Mobile participants will not receive the presentation. This is addressed in the SCOPIA 7.7 solution.

---

### About RADVISION

RADVISION (NASDAQ: RVSN) is the industry's leading provider of market-proven products and technologies for unified visual communications over IP and 3G networks. With its complete set of standards based video networking infrastructure and developer toolkits for voice, video, data and wireless communications, RADVISION is driving the unified communications evolution by combining the power of video, voice, data and wireless – for high definition video conferencing systems, innovative converged mobile services, and highly scalable video-enabled desktop platforms on IP, 3G and emerging next generation networks. For more information about RADVISION, visit [www.radvision.com](http://www.radvision.com)
